Project Abstract Submission Form

Sec No-	Team No-12	Project Title- Women safety app sos and live tracking
---------	------------	---

1. Abstract

The Women Safety App – SOS and Live Tracking is designed to provide quick and reliable assistance to women during emergency and unsafe situations. In many situations, a woman may not have enough time to call family members or explain her location when she is in danger. This project provides a simple solution through an SOS emergency feature and location tracking. The application allows users to register their details and add trusted emergency contacts such as parents, family members, or friends. When the user feels unsafe, she can press the SOS button to immediately send an emergency alert to the selected contacts. The alert can include the user's current location, allowing trusted contacts to know where the user is and take appropriate action quickly.

The application also provides a live tracking feature that can continuously share the user's changing location with authorized emergency contacts during an emergency. This helps family members or trusted people monitor the user's movement and understand her current situation. The system can store important information such as user details, emergency contacts, SOS alerts, and location information in a database. The application is designed with a simple and user-friendly interface so that the emergency features can be accessed quickly without complicated steps. The proposed system combines SOS alerts, GPS-based location services, live tracking, and backend database management to provide an effective safety solution. The main goal of the project is to improve women's personal safety, reduce the time required to request help, and enable trusted contacts to respond quickly during critical situations.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520090032	D Manya Akshitha	
2520090171	R Bhanu Priya	
2520090144	Nirvighna Sai	

3.Frameworks / Platforms / Software Used

- **Frontend:** HTML, CSS, JavaScript
- **Backend:** Node.js, Express.js
- **Database:** MySQL
- **Database Management:** MySQL Workbench
- **Location Services:** Google Maps API / GPS
- **Development Environment:** Visual Studio Code
- **Version Control:** Git and GitHub
