

RDBMS Foundations

RDBMS: Relational Database Management System.

invented by Dr. Edgar F. Codd,

Year: 1970

Known as: Father of the Relational Database Model

RDBMS stands for Relational Database Management System.

It is a software system used to store, manage, and organize data in tables made up of rows and columns. Different tables can be connected using relationships. RDBMS uses SQL to create, retrieve, update, and delete data. Examples include MySQL, Oracle, PostgreSQL, and SQL Server.
